

# ORACLE XML PUBLISHER

**Simplify Reporting. Remove Complexity. Reduce Cost.**

**ONE SOLUTION FOR ALL YOUR DOCUMENTS**

## Customer facing Documents:

Invoices, Purchase Orders  
Bills of Lading, Contracts  
Proposals, Statements  
Financial Reports, Marketing  
Materials, Packing Lists, Labels

## Government Forms:

Grant Applications, HR forms,  
tax forms

*Oracle XML Publisher offers the most efficient, scalable reporting solution available for complex, distributed environments. It provides a central architecture for generating and delivering information to employees, customers, and business partners—both securely and in the right format. Oracle XML Publisher reduces the high costs associated with the development, customization and maintenance of business documents; while increasing the efficiency of reports management. Utilizing a set of familiar desktop tools users can create and maintain their own report formats based on data extracts from diverse sources.*

## Choose Your Design Tool

XML Publisher report formats can be designed using Microsoft Word or Adobe Acrobat – tools most users are already familiar with. There are no proprietary design studio components required, meaning no extra cost and no extra learning curve.

## Data from Anywhere

XML Publisher can accept and format any well-formed XML data, as well as generate the data. It can therefore be integrated with any database, application, or process that can generate XML, whether that be a database, an ERP application, or a Web service to format output and deliver to consumers. XML Publisher also allows you to bring data in from multiple data sources into a single output document.

## Deliver to Anywhere

Deliver your content via printer, e-mail, fax, WebDav, or publish your report to a portal. The Delivery Manager's open architecture allows for easy implementation of custom delivery channels, as well.

## Communicate with the World

Report layouts can be created for any combination of 185 languages and 244 territories. These layouts are converted to industry-standard files for easy in-house translation or delivery to third party translation providers. Because each translation is a separate file, modifications can still be made to the layout without impacting translations. XML Publisher also offers advanced bidirectional and font handling support.

## Unsurpassed Performance

XML Publisher is based on the W3C XSL-FO standard and it is the fastest, most

scalable implementation in the world today. It can handle very large data inputs and generate output in less time, using very low levels of CPU time and memory.

**Operational Reports:**

Trial balances, invoice registers, receipt registers, sales reports, inventory listings

**Electronic Commerce:**

Electronic funds transfer (EFT), Electronic Data Interchange (EDI)

**Checks and labels:**

**Open Standards. Easy Integration.**

XML Publisher is built on open standard technologies. It is a J2EE application that can be deployed to any J2EE container. Data is handled as XML and the layout templates created in the desktop applications are internally converted to XSL-FO, another W3C standard. Outputs generated by the application are also industry standards such as PDF, RTF, and HTML. The delivery protocols are Internet Printing Protocol (IPP), WebDAV, FTP, AS2.

**Key Features:**

**Report Features**

- Full range of charting capabilities
- Conditional formatting
- Report interactivity: filter, sort, hide columns
- Formulas and functions
- Multiple table/forms layout
- Cross-tab support
- Watermark support
- Rich text formatting

**Design Tools**

- Use Microsoft Office or Adobe Acrobat to design layout
- Use XMLP's Template Builder plug-in to MS Word for drag-and-drop design

**Font Support**

- Ships with full set of Unicode fonts
- Advanced font subsetting and embedding negate need for language-specific printers
- Supports CJK, BiDi, MLS
- Support for external fonts, such as barcodes and MICR

**Document Generation**

- Output formats: PDF, RTF, HTML, EXCEL, XML, eText (for EDI and EFT)
- Batch support
- Document Merging
- Pixel-perfect document rendering

**Language Support**

- No dependency on installed languages
- No dependency on the database character set
- Generate an XLIFF file for each translation to use one layout for multiple languages, or create separate layouts for languages

**Security**

- Supports PDF security levels for Read Only/Editable, Copy Text, Printable, and Password Protection

**Delivery**

- Supports delivery via printer, fax, e-mail, WebDav, FTP, HTTP, or custom channels
- Redeliver documents
- Supports bursting of one report output to multiple destinations
